How to Use This Resource

The *Summer Scholars Mathematics* curriculum has been designed to meet the needs of summer learning programs. Scaffolded lessons, mathematical discourse, and STEAM activities are presented in a flexible format to make learning (and teaching) fun and effective for everyone.

What's Included?

Teacher's Guide

The daily lessons enhance instruction with research-based mathematics instructional practices.

Student Guided Practice Book

This book encourages students' mathematical fluency with multiple opportunities to apply learning.

Management Guide

This guide helps teachers plan effectively with flexible lesson pacing and a scope and sequence designed specifically for varied summer settings.

12 Mathematical Discourse Task Cards

These cards provide rich problem-solving tasks for students to solve and discuss collaboratively. They are provided in both print and digital format.

Smithsonian STEAM Readers

These books and the included STEAM challenges foster content-area literacy and encourage students to collaboratively solve real-world problems.

Digital Resources

These resources increase student engagement and enhance instruction. Family Engagement Letters are provided for a strong school-home connection.

Classroom Library with 10 Books

These mathematics- and science-focused books inspire curiosity and a love of reading.

How to Use This Resource *(cont.)*

Scaffolded Mathematics Instruction

The student-centered Gradual Release of Responsibility model is embedded into each of the mathematics lessons. Within every two-day lesson, the responsibility shifts from the teacher (I Do) to the student (You Do).

Day 1
STEAM Challenge

Making Maps

Define the Problem

1. Display pages 4 and 5 in the Making Maps book. Ask students what they see or what they notice about the images.
2. Create two columns on the board or on chart paper, and label them "Type of Map" and "How It's Used." As a group, brainstorm different types of maps and their many uses in everyday life. Record the ideas in the chart. For example, a road map can be used to help people drive from place to place or to plan a road trip in advance.
3. Reveal the STEAM Challenge by reading aloud pages 26–27 of the book. Have students follow along to the STEAM Challenge on page xx of the Student Guided Practice Book.
4. Display *Make a Map* from page xx of the Student Guided Practice Book. Have students summarize the challenge with partners. Summaries should include constraints and criteria.
 - Support students with the following sentence frame to help them summarize: Create a map that _____.

Vocabulary Activity

1. Write the vocabulary words on the board or on chart paper (accurate, compass, Sahara, satellites, sound waves), and discuss their meanings. Show students images related to the words to build context. (Pictures from the book may be used.)
2. Place students into groups. Assign each group a different vocabulary word. Have groups create small posters for the words, with pictures to help explain their meanings. Then have groups present their work.
3. Explain to students images and text work together to help readers understand information that might otherwise be challenging.

Read Aloud

1. Read aloud the beginning of the *Map* book for about 10 minutes.
2. Have pairs of students discuss information and any questions they have. Ask students to share their thoughts with the whole group.
3. Tell students you will read and act on the next day of instruction.

Icons indicate student groupings: whole group, collaborative, and independent.

Stopwatch icons indicate suggested durations.

Day 2
Place Value

One, Tens, and Hundreds

Progress Monitoring 8

1. Have students complete Quick-Check on page xx of the Student Guided Practice Book to gauge their progress toward mastery of the learning outcomes.
2. Based on the results of the Quick-Check and your observations during the lesson, identify students who may benefit from additional instruction in the learning outcomes. These students should be placed into a small group for reteaching.

Rotations 8

Place students into two groups. Work with one group on the *Refocus* activity while the other group is completing the *Practice* activity. Rotate after 15 minutes. Work with the second group on the *Extend* activity while the first group completes the *Practice* activity.

Refocus 8

1. Provide additional practice building concrete examples of place value with base ten blocks. Have students use base ten blocks to see that when there are 10 ones, this is exactly equal to one ten. As you model, have the ten blocks to prove the equality by one-to-one correspondence. Use 10 tens to build a hundreds square. Again, build directly on equality.
2. After these proofs of equality, present this example:
 - Show eight ones with base ten blocks. Write 8.
 - Add two more ones, counting to 10. Write 10, and point out the 1 in the tens place and the 0 in the ones place.
 - Ask students to find one block that is equal to one ten and zero ones. (*the ten*)
 - Use a ten block and four ones. Ask, "How many ones are there?" (*four*) "How many tens are there?" (*one*) "As an equation, that is 10 + 4. How would we write this number?" (*14*).
3. Support students as they complete Question 1 on *Refocus* from page xx of the Student Guided Practice Book.

Extend 8

1. Have students use patterns to add larger numbers, such as $8 + 4$, $80 + 40$, and $800 + 400$.
2. Support students as they complete the *Extend Learning Task* from page xx of the Student Guided Practice Book.

Practice 8

- **Refocus Group Practice:** Have students solve Question 2 on *Refocus* from page xx of the Student Guided Practice Book to reinforce their learning.
- **Extend Group Practice:** Have students complete *Independent Practice* from page xx of the Student Guided Practice Book to reinforce their learning.

Each lesson page and student page clearly indicates the instructional day.

Assessment opportunities are provided in every lesson.

Independent Practice

Name: _____ Date: _____

Directions: Write the number names and/or standard numerals.

Write the number name in words. Remember: Write it like you say it, and use the vocabulary chart to help you with spelling.

Extend Learning Task

Day 14

Name: _____ Date: _____

Directions: Using the six digits given, create two three-digit numbers. Subtract them to get as close to zero as possible. For each round, the difference is your score. Remember, zero is the goal, so the lowest score wins!

Round One	Digits: 6 2 2 5 1 3
My numbers:	
Difference:	

Round Two	Digits: 4 5 7 8 9 1
My numbers:	
Difference:	

Round Three	Digits: 9 5 2 5 4 8
My numbers:	
Difference:	

There are many ways for students to access the student activity pages:

- use individual books (purchased separately)
- make copies from provided book
- project pages on an interactive whiteboard
- print pages from digital resources
- share on digital devices (see page 41 for more information)

How to Use This Resource *(cont.)*

Mathematical Discourse Task Cards

The Mathematical Discourse Task Cards present rich math problems for students to solve and discuss collaboratively. The three mathematical discourse routines walk students through the problem-solving process.

Cards can be displayed for the whole class.

Extension questions challenge students to think more deeply about the mathematical concept.

Cards are reproduced in the *Student Guided Practice Book* for individual use.

Activity sheets help walk students through the routines.

How to Use This Resource *(cont.)*

STEAM Challenges

There are five STEAM Challenges included in each level of *Summer Scholars*. Each challenge is completed over five days to give students ample time to investigate, test, and retest their ideas. In addition to meeting specific criteria, students are also challenged to improve their work over the five days.

STEAM CHALLENGE

Day 1

Define the Problem
A new student just joined your class. Your teacher has asked you to create a school map for the student.

Constraints: Your map must be drawn from a bird's-eye view. You must include color in your map.

Criteria: Your map must have a map legend, a compass rose, and drawings of important places at your school. It should be clear and easy to use.

1 Research and Brainstorm
How do maps help people get around? What will different colors mean on your map? What are the important places at your school? Where are they located?

2 Design and Build
Decide what you will include in your map legend. Then, sketch your school as though you were looking from above. Draw and color your map.

3 Test and Improve
Share your map with your friends. Ask them to find a place on your map. Did they find it easily? Is your map clear? How can you improve your map? Improve your map, and present it again.

4 Reflect and Share
Could a new student read and understand your map? How can you make your map easier to follow?

Build background knowledge and spark student interest with engaging readers and short texts.

Students reflect on the process and their final products.

Days 3-4 Overview
Numbers to 1,000
Learning Outcome
Read and write numbers to 1,000 using base ten numerals and number names.

Focus
The following lesson will address these focus questions: What is the form numerals and number names? When can both forms be used? Ask questions on the board or on chart paper and read them aloud.

Student Misconception
This particular standard expands on students' previous knowledge. It is common and incorrect for students to add the word "and" over 100. Watch and listen for this so clarification can be made at that point, which is why the word is not correctly used within why.

Building with Blocks
Learning Outcome
Work collaboratively to solve a problem.

Making Maps
Learning Outcomes
Create and test a map of the school.

Materials
Student Guided Practice Book (pages xx-xx)
Number Name Cards (numname.pdf)
base ten blocks
chart paper
construction paper

Day 9

Rebuild and Refine
Name: _____ Date: _____
Directions: Gather your materials. Plan your steps. Rebuild your structure. Record the changes you make. Tell why you made those changes.

Think About It!
How do you need to change your steps to rebuild your structure?

Steps to Rebuild

Changes Made While Building	Reason for Changes

Activity sheets lead students through the Engineering Design Process.

Materials needed for each challenge are clearly listed. A full list of all STEAM Challenge materials is included in the digital resources.

Mathematics Skills and Concepts 60–65 minutes per day		Problem-Solving and Discourse 10–15 minutes per day		STEAM 45 minutes per day		
Mathematics Focus	Standards	Mathematical Practice and Card Title	Standard	Challenge Title and STEAM Step	Standard	
Day 9	Subtracting within 100	Use strategies to fluently subtract within 100.	Think Using Quantities “Baseball Cards”	Make sense of quantities and their relationships in problems.	Piece by Piece	Make sense of problems and plan, solve, justify, and evaluate solutions.
					Redesign and Rebuild	
Day 10				Piece by Piece	Retest and Share	
Day 11	Adding within 1,000	Add within 1,000 using concrete models, drawings, or other strategies.	Use Tools Strategically “Aisha’s Beads”	Consider and use available tools when solving problems.	Living in Sunlight	Make sense of problems and plan, solve, justify, and evaluate solutions.
Extremes					Define the Problem	
Day 12				Living in Sunlight	Recognize and draw shapes having specified attributes.	
Day 13	Subtracting within 1,000	Subtract within 1,000 using concrete models, drawings, or other strategies.	Use Tools Strategically “Donating Canned Goods”	Consider and use available tools when solving problems.	Living in Sunlight	Apply mathematics to solve problems arising in everyday life, society, and the workplace.
Extremes					Build and Test	
Day 14				Living in Sunlight	Improve	
Day 15	Solving Two-Step Word Problems: Same Operations	Add and subtract to solve two-step word problems within 100.	Think Using Quantities “Missing Recess”	Make sense of quantities and their relationships in problems.	Living in Sunlight	Make sense of problems and plan, solve, justify, and evaluate solutions.
Extremes					Reflect and Share	
Day 16				Volcanoes	Develop a model to represent the shapes and kinds of land and bodies of water in an area.	
				Learn Content, Understand the Challenge, and Brainstorm		

Rising 3rd Grade Scope and Sequence *(cont.)*

		Mathematics Skills and Concepts 60–65 minutes per day		Problem-Solving and Discourse 10–15 minutes per day		STEAM 45 minutes per day	
		Mathematics Focus	Standards	Mathematical Practice and Card Title	Standard	Challenge Title and STEAM Step	Standard
Day 17	Bar Graphs		Use and interpret bar graphs to solve problems involving addition and subtraction.	Analyze the Structure "Outside Fort"	Observe closely to discern a pattern or structure in a problem.	Volcanoes Design and Build	Apply mathematics to solve problems arising in everyday life, society, and the workplace.
Day 18							
Day 19	Measuring Length		Use appropriate tools to measure the lengths of objects in standard units, and describe the relationship between the units and the sizes of the objects.	Construct and Critique Arguments "Robert's Ruler"	Use assumptions, definitions, and previously established results to construct arguments.	Volcanoes Redesign and Rebuild	Make sense of problems and plan, solve, justify, and evaluate solutions.
Day 20							
Day 21	Telling Time		Tell and write time from analog and digital clocks to the nearest five minutes, using a.m. and p.m. appropriately.	Mathematize the Situation "Only Time Will Tell"	Apply mathematics to solve problems in everyday life.	Dealing with Wildfires Define the Problem	Make sense of problems and plan, solve, justify, and evaluate solutions.
Day 22							
Day 23	Shapes and Their Attributes		Recognize and draw shapes based on their defining attributes, such as the number of angles or equal sides.	Think Using Quantities "Guess Farrah's Shape"	Make sense of quantities and their relationships in problems.	Dealing with Wildfires Build and Test	Apply mathematics to solve problems arising in everyday life, society, and the workplace.
Day 24							
Day 25	Culminating Activity			Dealing with Wildfires Reflect and Share	Make sense of problems and plan, solve, justify, and evaluate solutions.		Make sense of problems and plan, solve, justify, and evaluate solutions.

Rising 3rd Grade STEAM Challenges and Materials

This chart includes descriptions and needed materials for the five STEAM Challenges.

Challenge Name	Description	Materials
<i>Making Maps</i> (reader)	Teams create school maps for a new student.	<ul style="list-style-type: none"> • colored pencils • crayons • graph paper • grid chart paper (two sheets per team) • markers • pencils
Piece by Piece	Students create building toys for kids to use.	<ul style="list-style-type: none"> • binder clips (10) • cardboard tubes (10) • clothespins (10) • craft sticks (20) • pipe cleaners (20)
<i>Living in Sunlight Extremes</i> (reader)	Teams build visors to block sunlight.	<ul style="list-style-type: none"> • cardboard pieces • craft sticks • glue • paper towel tubes • scissors • straws • string • tape
Volcanoes	Students build party hats for a volcano-themed birthday party.	<ul style="list-style-type: none"> • construction paper (various colors) • cotton balls (5–10) • tissue paper (volcano colors; 1–2 of each) • yarn and/or ribbon (volcano colors)
<i>Dealing with Wildfires</i> (reader)	Teams draw designs for the land around their homes that will keep them safe from wildfires.	<ul style="list-style-type: none"> • chart paper (two sheets per team) • drawing materials

Rising 3rd Grade Classroom Library Information

This chart includes important information about the books included in the classroom library.

Book Title	Lexile® Measure	*Guided Reading Level	Summary
<i>The British Museum: Classify, Sort, and Draw Shapes</i>	540L	P	Welcome to the British Museum! It is built for exploring. Look for hidden shapes in the museum and its treasures. Try to find them all as you learn more about this special place!
<i>Earth and Moon</i>	470L	J	Earth is always moving. The moon is always moving, too. It travels around Earth. The moon looks different each night because of its movement.
<i>Blast Off to Camp: Time</i>	610L	O	The countdown is on. Isabella is heading to Space Camp! It's only a week long, so she wants to make the most of her time. Blast off to camp, and find out what it takes to be an astronaut!
<i>Fields, Rinks, and Courts: Partitioning Shapes</i>	630L	O	Before the kickoff, jump ball, or coin toss of a game, the playing surface must be designed. After all, each sport has a surface with a purpose! Explore how partitioned shapes are important to the fields, rinks, and courts of popular sports.
<i>Habitats</i>	460L	N	A habitat gives shelter to plants and animals. It's a living thing's home. It also helps them survive. There are many different types of habitats on Earth.
<i>How Sound Moves</i>	500L	K	Sounds are all around us. Some are loud. Others are quiet. Some sounds are high. Others are low. The sounds that we hear travel as sound waves.
<i>The Lemonade Stand: Financial Literacy</i>	580L	Q	On a hot summer day, nothing tastes better than an ice-cold glass of lemonade. At least, that is what Juan and Rose think! But it is not all about sunshine and sugar. Juan and Rose need to learn more about starting a business. Will they make money or just make a mess?
<i>Pollination</i>	510L	N	Living things depend on one another. Insects, water, and wind help plants grow new plants. They have an important role in nature. They work together to keep one another alive.
<i>Lasers: Measuring Length</i>	550L	R	Lasers are brighter than the sun, strong enough to reach the moon, and sharp enough to cut tiny holes. Get laser-focused while you measure lengths. Find out what makes these bright beams light up.
<i>Water Cycle</i>	480L	O	Every living thing needs water to survive. Water is an important part of life. There is water all around us. It moves through the water cycle. It brings water to all parts of the planet.

*These titles have been officially leveled using the F&P Text Level Gradient™ Leveling System.

SUMMER Scholars

Mathematics

Teacher's Guide

Rising 3rd Grade

Days 3–4 Overview

Numbers to 1,000

Learning Outcome

- Read and write numbers to 1,000 using base ten numerals and number names.

Focus

The following lesson will address these focus questions: *What is the difference between writing standard form numerals and number names? When can both forms be helpful?* You may wish to write the focus questions on the board or on chart paper and read them aloud to students.

Student Misconception

This lesson expands on students' previous knowledge of basic numbering skills through 100. It is common and incorrect for students to add the word *and* when reading and/or writing number names over 100. Watch and listen for this so clarification can be made. The word *and* is used to denote a decimal point, which is why the word is not correctly used within whole numbers.

.....

Mathematical Discourse

Learning Outcome

- Work collaboratively to solve a problem.
-

Making Maps

Learning Outcomes

- Create and test a map of the school.

Materials

- | | | |
|---|----------------------|-----------|
| • <i>Student Guided Practice Book</i> (pages 16–27) | • base-ten blocks | • markers |
| • Number Name Cards (numname.pdf) | • chart paper | • tape |
| | • construction paper | |

Materials per STEAM Group

- | | | |
|-------------------|---------------------------------|-----------|
| • colored pencils | • graph paper | • markers |
| • crayons | • grid chart paper (two sheets) | • pencils |

Numbers to 1,000

Warm-Up

1. Distribute base-ten blocks to students. Say, "Use your base-ten blocks to find two tens." Write *2 tens* on the board or on chart paper. Ask, "What number name do we have for two tens?" (*20*) Write the number 20 and the word *twenty* next to *2 tens*.
2. Repeat this process with three tens, writing *3 tens*, *30*, and *thirty*.
3. Say, "With a partner, use your base-ten blocks to keep making numbers, counting by tens. Be ready to tell the class how many tens you used and the number name for your model."
4. Elicit student responses, recording the number of tens, the standard form number, and the number name on the board or on chart paper.

Language and Vocabulary

1. Write the following vocabulary terms on the board or on chart paper:

number name standard form

numeral
2. Say, "A numeral is a number written using digits. That is called standard form. Number names are how we say numbers using words."

3. Say, "Let's play a game. You are going to give me a number up to 1,000. I will write the number name, the exact words you are saying. Then, you can write the digits of your number, or the standard form."
4. On the board or on chart paper, go through several examples. Remember, you write the words (number name), and the student writes the standard form or numeral. The chart below serves as an example.

Standard Form	Number Name
3	three
17	seventeen
46	forty-six
50	fifty
94	ninety-four
237	two hundred thirty-seven
609	six hundred nine

Numbers to 1,000

I Do

1. Create a three-column word wall on chart paper with these three headings:

numbers 1–20	numbers 21–29	numbers 30 or greater

2. Distribute copies of precut number name cards (available in the digital resources). These are printed with number names and a blank for the standard form numeral. Here is an example: _____ *eleven*. Distribute two or three cards to each student until all are assigned. Say, “You have been given a number name in words with a blank in front of it. Read it to yourself, and write the standard form numeral in the blank. That is the number in digits. Check your answer with a partner. Then, tape your card to the poster in the correct column.” You may wish to complete one card as a class example. Allow time for students to complete the task. As they are taping their notes to the chart paper, check for accuracy, and help to order the cards from least to greatest.
3. After the chart is completed, ask, “What patterns or similarities do you see?” Make sure students mention “-teen” suffixes, hyphens between tens and ones, and the use of the word *hundred*.

Numbers to 1,000

We Do

1. Display *What's in a Name?* from page 16 of the *Student Guided Practice Book*. Say, "Look at the number 29."
2. Say, "We will use our chart to write the number name for 29. How many tens are there?" (*two*) "Since it's in the tens place, we have to say the number name for two tens. What is that?" (*twenty*) "If you are not sure how to spell the word, refer to the chart we made. Finally, we need to say and write the number from the ones place. (*nine*) Who remembers something else that I need to write but haven't yet? Here's a hint: It's not a number or letter." (*the hyphen between twenty and nine*) "You should have written *twenty-nine* on your activity sheet for Question 1." Write the number name on the board or on chart paper.
3. Say, "Look at Question 2. It has three digits: 2, 4, and 7. The 2 is in what place?" (*hundreds*) "So, the place value of the 2 means our number starts with the words *two hundred*." Give students time to write. "Now, read the last two digits, and write the number name for them. Watch your spelling by checking the chart. How do we say that number, with a 4 in the tens place and a 7 in the ones place?" (*forty-seven*) "Our number name is written as *two hundred forty-seven*." Write the number name on the board or on chart paper.
4. Say, "Now, complete Question 3 on your own." Review the correct answer. (*two hundred seventy-four*)
5. Say, "The next section says to write the standard-form numeral for the number name. Sometimes, it helps to hear yourself say the number. Read Question 4 aloud, but in a whisper. Think about what that number would look like. You see the number name *five*. Write that digit." (5) "Next, it says

hundred. That word is telling us what the place value is for the five. Since we see *hundred*, how many digits will there be?" (*three*) "So the rest of the words will tell us the rest of the digits. It says *sixty-one*. What do those digits look like?" (*a 6, then a 1: 61*) The final answer should be the three digits together: 5, 6, and 1." Write the number on the board or on chart paper.

Support for Language Learners: Students who struggle to write the number in words would benefit from a word bank or chart, such as the one completed earlier in the lesson. Also, these students should be encouraged to read the numeral out loud before trying to write it in words.

You Do

1. Have students complete *Name That Number* from page 17 of the *Student Guided Practice Book*. Remind students to look at the chart previously made in the lesson to help them with spelling and to identify patterns in naming numbers.
2. Have students share their number names. If students have difficulty explaining their reasoning, remind them to use the vocabulary terms.

Construct and Critique Arguments

Understand the Strategy

The Construct and Critique Arguments practice/process stems from *construct viable arguments and critique the reasoning of others*. As this practice/process is introduced, it is important that students understand how to justify their thinking by providing evidence and respectfully critiquing someone else's thinking. While tasks in this practice offer opportunities for students to explain their work and show their reasoning, tasks have also been strategically built to allow them to critique someone else's thinking. Generally, students are accustomed to having to explain their own thinking, but rarely are they given the chance to explain someone else's thinking (correct or incorrect) or to evaluate someone else's work using kind and respectful words. This practice/process is intended to support the development of these skills.

Procedure

1. Display the *Building with Blocks* task card, and read aloud the text. Remind students to use the Understand and Plan, Share and Discuss, and Reflect and Write routines as they complete the task. Review these routines if needed. (See pages 21–26 in the *Management Guide*.)
2. Allow time for students to collaborate with partners as they follow the routines and work through the task from pages 18–19 of the *Student Guided Practice Book*. (Students will complete the extensions on the next day.)

Answer: Yes, they are both correct, since 46 can be made both ways. Explanations will vary.

Possible Misconception: Students may think that because 46 has the digit 4 in the tens place, there must be 4 tens. While the number 46 has the digit 4 in the tens place, it can be made up of different groupings of tens.

Language Support

- **Tier 3:** base-ten blocks, tens, ones
- **Tier 1:** correct

Scaffolding

Provide students with base-ten blocks, and ask them to make a smaller value than 46, such as 12. Then, ask them to make 24. Ask them what they notice about the different ways to make these numbers using the blocks.

Making Maps

Materials and Preparation

- Prepare all materials for the STEAM Challenge (colored pencils, crayons, graph paper, 2 sheets of grid chart paper, markers, pencils).

Read Aloud

1. Review the information from the previous day's read aloud.
2. Read another section or a few pages of the *Making Maps* book for about five minutes. Pause periodically to discuss new information and any questions students may have.

Build

1. Have groups review their *Team Designs* activity sheets from the previous day. Explain that when students draw their maps, they must follow their design plans. Reassure them that they will have the opportunity to change and improve their designs after they present them. Review classroom expectations for working with materials. Then, give students time to create maps.
2. Display *Think about It* from page 20 of the *Student Guided Practice Book*. Explain that reflection is an important part of the engineering design process. Read aloud numbers 1 and 2 on the activity sheet, and have students write their responses. Ask volunteers to share. The rest of the activity sheet will be completed later.

Test

1. Gather teams for testing. Explain that teams will offer feedback after the test. Use *Friendly Feedback* from page 21 of the *Student Guided Practice Book* to review best practices for giving feedback.
2. Have students use *Can You Find It? Test Results* from page 22 of the *Student Guided Practice Book* to record their results as a team. Allow time for teams to present their maps. For each map, ask volunteers from other teams to find an important place at your school on the map. A successful map will allow a user to locate specific spots or areas within the school quickly. Ask volunteers to give friendly feedback.
3. To further challenge students, ask this question: *How might color-coding on a map be helpful to a viewer?* Guide students to the idea that different colors for different areas or specific spots on a map might make it easier to read, understand, and follow.

Numbers to 1,000

Progress Monitoring

1. Have students complete the *Quick Check* from page 23 of the *Student Guided Practice Book* to gauge their progress toward mastery of the learning objectives.
2. Based on the results of the *Quick Check* and your observations during the lesson, identify students who may benefit from additional instruction in the learning outcomes. These students should be placed into a small group for reteaching.

Rotations

Place students in two groups. Work with one group on the Refocus activity while the other group is completing the Practice activity. Rotate after 15 minutes. Work with the second group on the Extend activity while the first group completes the Practice activity.

Refocus

1. Tell students they are going on a “matching scavenger hunt.” (A Refocus presentation is provided in the digital resources for this activity.) Give each student a list of 10 numbers in standard form. Have the word names of these numbers written on construction paper, displayed around the room, and identified by a letter. Encourage each student to read aloud the number on their paper and find the word name posted in the classroom. Once students find the word names that match, they write the identifying letters so the matches can be checked. Review all answers once students have had time to circulate and find the matches.
2. Assign one of the numbers to each student. Their task is to build their number using base-ten blocks, display it to the group, and explain why the number’s name matches the model.
3. Support students as they complete Question 1 on *Refocus* from page 24 of the *Student Guided Practice Book*.

Extend

1. Have students write 5,342 in word form.
2. Support students as they complete the *Extend Learning Task* from page 25 of the *Student Guided Practice Book*.

Practice

- **Refocus Group Practice:** Have students solve question 2 on *Refocus* from page 24 of the *Student Guided Practice Book* to reinforce their learning.
- **Extension Group Practice:** Have students complete *Independent Practice* from page 26 of the *Student Guided Practice Book* to reinforce their learning.

Numbers to 1,000

Math in the Real World

1. Display *Math in the Real World: Cracking the Code* from page 27 of the *Student Guided Practice Book*. Have a student read the task aloud. Tell students to explain or summarize the task to their partners. Have a few students share their summaries.
2. Ask students to think about what information they will need to solve the task and what the task is asking them to do. Then, have them share with partners. Ask a few students to share aloud. Have students work in groups of two or three to complete the task.
3. As students are working, circulate and ask focusing, assessing, and advancing questions:
 - What information do you know? What are you trying to find out?
 - How many numbers are in the combination? How many digits are in each number?
 - In what form are the numbers written in the problem?
 - Where do hyphens usually go? Between which place values?
 - How can you decide where one three-digit number ends and the next begins?
 - Can the vocabulary chart we made earlier help you to write the number words in standard form?

Support for Language Learners:

- I put _____ between the tens number and the ones number.
 - I put _____ before the next hundreds number.
4. Observe how students are solving the task, and choose a few groups who solved the task in different ways to share their solutions and reasoning. Try to have the solutions move from concrete representations to more abstract representations. Make sure students explain their reasoning as they share solutions.
 5. As groups are sharing their solution paths, reasoning, and strategies, ask questions:
 - Who can explain _____'s idea another way?
 - Is there another way to solve the problem?
 - How is this solution similar to _____'s solution?

Construct and Critique Arguments

Mathematical Discourse Card Extensions

1. Allow time for students to complete the routines for the *Building with Blocks* task from the previous day.
2. Have students work in pairs to complete the extensions.
 - Make 51 using base-ten blocks. How many different ways can you make 51? (*6 ways*)
 - How many ways can you make 105 using base-ten blocks? (*12 ways*)

Making Maps

STEAM Challenge

Materials and Preparation

- Review all designs.
- Prepare all materials for the STEAM Challenge (colored pencils, crayons, graph paper, 2 sheets of grid chart paper, markers, pencils).

Read Aloud

1. Review the information from the previous day's read aloud.
2. Read another section or a few pages of the *Making Maps* book for about five minutes. Pause periodically to discuss new information and any questions students may have.

Improve

1. Have groups review the feedback they received on the previous day of instruction.
2. Provide time for teams to brainstorm ways to improve their designs based on test results and feedback. Refer students back to their *Team Designs* activity sheets. Ask them to sketch their improved designs and explain any changes.
 - Challenge successful teams with additional constraints or criteria for the second design (e.g., create a 3D map of the school, create a digital version of the map).
3. Have students gather materials to improve their designs. Then, have them make their improvements and present their maps again. Remind students that a successful map will allow a user to locate specific spots or areas within the school quickly.
4. Have students complete numbers 3 and 4 on *Think about It* from page 20 of the *Student Guided Practice Book*.

SUMMER
Scholars
Mathematics

Cuaderno de
prácticas guiadas
para el estudiante

Rumbo a 3.^{er} grado

Nombre: _____ Fecha: _____

¿Qué hay en un nombre?

Día 3

Instrucciones: Escribe el nombre de cada número o la cifra.

Escribe el nombre del número para cada cifra.

1 29

2 247

3 274

Escribe la cifra para el nombre del número.

4 quinientos sesenta y uno _____

Escribe el nombre de ese número

Instrucciones: Escribe el nombre de cada número o la cifra.

Escribe el nombre del número para las cifras.

1 395

2 938

3 651

Escribe la cifra para los nombres de los números.

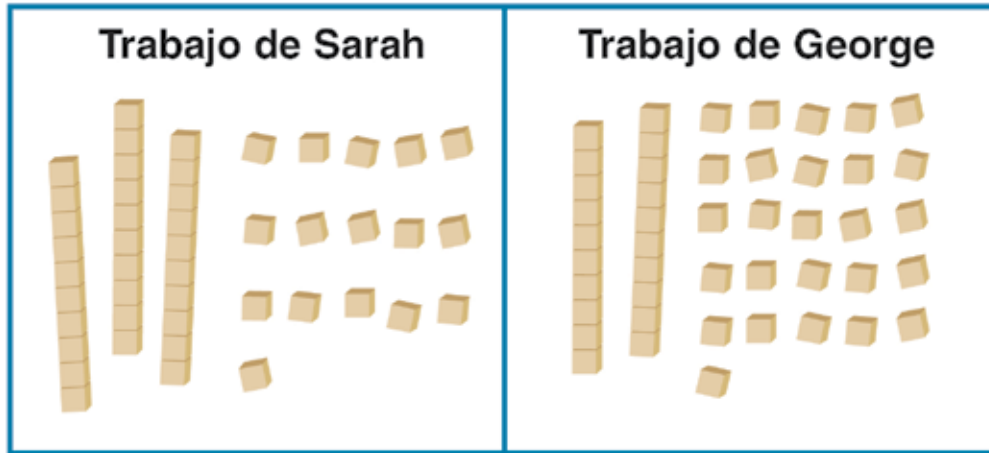

4 setecientos noventa y seis _____

5 ochocientos dieciocho _____

6 ciento ochenta y tres _____

Construir con bloques

Sara dice: “3 decenas y 16 unidades es igual a 46”.

George dice: “2 decenas y 26 unidades es igual a 46”.

¿Los dos tienen razón? Explica tu razonamiento.

¡Amplia tu razonamiento!

Forma 51 con bloques de base diez. ¿Cuántas maneras diferentes tienes de formar 51?

¿Cuántas maneras tienes de formar 105 con bloques de base diez?

Elabora y critica argumentos

Reflexiona y escribe

Estudiante 1: “¿Cómo demostramos que nuestras respuestas eran correctas?”.

Estudiante 2: Responde.

Estudiante 2: “¿Estamos de acuerdo o en desacuerdo con el proceso de resolución de problemas de cada uno?”.

Estudiante 1: Responde.

Ambos piensan: “¿Cómo elaboramos y criticamos argumentos?”.

Ambos escriben (escoge uno):

Para elaborar argumentos, _____

O

Para criticar argumentos, _____

Nombre: _____ Fecha: _____

Piénsalo

Día 3

1. Fue (difícil/fácil) crear un diseño en equipo porque _____

_____.

2. Ayudé a mi equipo al _____

_____.

3. Nuestro diseño (pasó/no pasó) la prueba porque _____

_____.

Para mejorar nuestro diseño, nosotros _____

_____.

4. Nuestro diseño mejorado (funcionó/no funcionó). Lo sé porque _____

_____.

5. Durante este desafío, aprendí _____

_____.

Mi parte favorita fue _____

_____.

Crítica constructiva

Instrucciones: La crítica constructiva puede ayudar a los demás a mejorar su trabajo. Usa estos comienzos de oraciones para hacer comentarios sobre el trabajo de tus compañeros.

Aclarar

¿Puedes explicar _____ ?

¿Por qué decidiste _____ ?

¿Cómo hiciste para _____ ?

Comentarios cálidos

Me gusta _____ porque _____ .

Es interesante que _____ .

_____ es una buena idea porque _____ .

Comentarios tibios

¿Has pensado en _____ ?

Me pregunto si _____ .

Tal vez quieras intentar _____ .

¿Puedes orientarte?: resultados de las pruebas

Instrucciones: Tilda las casillas para indicar si los mapas cumplieron las limitaciones y los criterios. Califica cada mapa en una escala del 3 al 1 para indicar si era claro y fácil de usar. Después, responde la pregunta.

Equipo	Limitaciones y criterios	Calificación 3 = Muy claro 2 = Un poco claro 1 = Para nada claro
	<input type="checkbox"/> dibujado desde una vista a vuelo de pájaro <input type="checkbox"/> colorido <input type="checkbox"/> con leyenda y rosa de los vientos	
	<input type="checkbox"/> dibujado desde una vista a vuelo de pájaro <input type="checkbox"/> colorido <input type="checkbox"/> con leyenda y rosa de los vientos	
	<input type="checkbox"/> dibujado desde una vista a vuelo de pájaro <input type="checkbox"/> colorido <input type="checkbox"/> con leyenda y rosa de los vientos	
	<input type="checkbox"/> dibujado desde una vista a vuelo de pájaro <input type="checkbox"/> colorido <input type="checkbox"/> con leyenda y rosa de los vientos	
	<input type="checkbox"/> dibujado desde una vista a vuelo de pájaro <input type="checkbox"/> colorido <input type="checkbox"/> con leyenda y rosa de los vientos	
	<input type="checkbox"/> dibujado desde una vista a vuelo de pájaro <input type="checkbox"/> colorido <input type="checkbox"/> con leyenda y rosa de los vientos	

¿Con qué mapa es más fácil orientarse? ¿Por qué?

Repaso rápido

Instrucciones: Resuelve.

Elige el nombre del número que coincide con las cifras.

- | | | | | |
|---|-----|-------|---|---------------------------|
| 1 | 926 | _____ | A | novecientos sesenta |
| 2 | 962 | _____ | B | novecientos veintiséis |
| 3 | 960 | _____ | C | novecientos dieciséis |
| 4 | 916 | _____ | D | novecientos sesenta y dos |

Escribe el nombre del dibujo de base diez con la cifra y con el nombre del número en palabras.

Concéntrate

Instrucciones: Resuelve.

1 Dibuja líneas para relacionar las cifras con el número en palabras.

49

cuatrocientos nueve

409

cuarenta y nueve

490

cuatrocientos noventa

2 Escribe el nombre del número.

Nombre: _____ Fecha: _____

Tarea de aprendizaje continuo

Instrucciones: Completa la tabla.

Día 4

Valor posicional	Forma estándar	Nombre del número
3 decenas, 6 unidades		
	82	
		ciento setenta y siete
9 centenas		
1 decena, 5 unidades		
	541	
		doscientos doce
		seiscientos diecisiete

Crea tu propia descripción de valor posicional. Después, escribe la forma estándar y el nombre del número.

Nombre: _____ Fecha: _____

Práctica independiente

Día 4

Instrucciones: Escribe los nombres de los números o las cifras.

Escribe los nombres de los números en palabras. Recuerda: Escríbelo como lo dices y usa la tabla de vocabulario como ayuda para la ortografía.

1 485 _____

2 652 _____

Con el dibujo de base diez, escribe la cifra y el nombre del número en palabras.

3

Descodifica el código

¿Puedes adivinar la combinación en dígitos de un candado de bicicleta? La combinación son tres números y cada uno tiene tres dígitos. Usa la pista escrita en las palabras de los tres números.

Pista: ochocientos setenta y seis quinientos catorce trescientos dos

Sugerencia: Sería de ayuda ubicar las comas donde corresponde.

 **Desarma el problema**

 **Prepara un plan**

 **Solución**

 **Repasa y explica**
